

Clinical Risk Assessment Report: Patient 27

1. Primary Outcome & Risk Summary

- Target: Occult Lymph Node (OLN) Metastasis
- Model Prediction: Negative for Metastasis
- Prediction Confidence: Moderate Confidence
- Absolute Predicted Risk: 9.3% (Diagnostic Threshold: 22.1%)
- Relative Risk Multiplier: 0.42x the diagnostic threshold

Clinical Takeaway:

The machine learning model classified this patient as Low-Risk for Occult Lymph Node (OLN) Metastasis. The primary driver determining this prediction is the Small Zone Emphasis (PET) (GLZLM_SZE.PET), which reduced the patient's absolute risk by 2.1%. Biologically, this feature reflects the proportion of small, fine texture zones, often correlating with a highly chaotic and erratic micro-architecture.

2. Key Pathological & Imaging Drivers (Elevating Risk)

No major risk-elevating features observed in the top drivers.

3. Protective / Mitigating Factors (Reducing Risk)

Small Zone Emphasis (PET) (GLZLM_SZE.PET) **Value: -1.25 [Bottom 10%] (-2.1%)**
Reflects the proportion of small, fine texture zones, often correlating with a highly chaotic and erratic micro-architecture.

Large Zone Emphasis (CT) (GLZLM_LGZE.CT) **Value: -0.14 [Avg (62th %ile)] (-1.0%)**
Reflects the presence of large homogeneous areas; lower values suggest a chaotic, heterogeneous microenvironment.

Tumor Sphericity (CT) (SHAPE_Sphericity(onlyFor3DROI)).CT) **Value: 0.73 [Top 22%] (-0.9%)**
Quantifies how closely the tumor resembles a perfect sphere; lower values indicate irregular, spiculated, or highly invasive margins.

Carcinoembryonic Antigen (CEA) **Value: 1.96 [Avg (26th %ile)] (-0.9%)**
Elevated levels are strongly associated with increased tumor burden and potential for micrometastasis.

75th Percentile Tumor Density (CONVENTIONAL_HUQ3) **Value: -0.16 [Avg (32th %ile)] (-0.8%)**
Reflects the overall physical density, solid components, and general attenuation characteristics of the tumor.

Maximum Tumor Density (CONVENTIONAL_HUmax) **Value: -0.27 [Avg (31th %ile)] (-0.8%)**
Reflects the most dense solid components or calcifications within the primary tumor lesion.

Short Run Low Gray-Level Emphasis (CT) (GLRLM_SRLGE.CT) **Value: -0.1 [Avg (62th %ile)] (-0.7%)**
Indicates fragmented areas of low density, often associated with diffuse micro-necrosis or loose tissue structure.

Long Run High Gray-Level Emphasis (PET) (GLRLM_LRHGE.PET) **Value: -0.78 [Bottom 4%] (-0.5%)**
Points to continuous, elongated bands of high-density or highly active tumor tissue.
