

Clinical Risk Assessment Report: Patient 36

1. Primary Outcome & Risk Summary

- Target: Occult Lymph Node (OLN) Metastasis
- Model Prediction: Negative for Metastasis
- Prediction Confidence: Moderate Confidence
- Absolute Predicted Risk: 10.2% (Diagnostic Threshold: 22.1%)
- Relative Risk Multiplier: 0.46x the diagnostic threshold

Clinical Takeaway:

The machine learning model classified this patient as Low-Risk for Occult Lymph Node (OLN) Metastasis. The primary driver determining this prediction is the Small Zone Emphasis (PET) (GLZLM_SZE.PET), which reduced the patient's absolute risk by 2.5%. Biologically, this feature reflects the proportion of small, fine texture zones, often correlating with a highly chaotic and erratic micro-architecture.

2. Key Pathological & Imaging Drivers (Elevating Risk)

No major risk-elevating features observed in the top drivers.

3. Protective / Mitigating Factors (Reducing Risk)

Small Zone Emphasis (PET) (GLZLM_SZE.PET) Value: -2.09 [Bottom 3%] (-2.5%)

Reflects the proportion of small, fine texture zones, often correlating with a highly chaotic and erratic micro-architecture.

Tumor Local Contrast (PET) (GLCM_Contrast(=Variance).PET) Value: -0.63 [Bottom 19%] (-1.1%)

Measures local variations and sharp transitions in density or metabolism, signifying an unstructured and variable tumor matrix.

Long Run High Gray-Level Emphasis (PET) (GLRLM_LRHGE.PET) Value: -0.88 [Bottom <1%] (-0.9%)

Points to continuous, elongated bands of high-density or highly active tumor tissue.

Short Run Low Gray-Level Emphasis (CT) (GLRLM_SRLGE.CT) Value: 0.36 [Top 3%] (-0.8%)

Indicates fragmented areas of low density, often associated with diffuse micro-necrosis or loose tissue structure.

Minimum Metabolic Activity (SUVmin) (CONVENTIONAL_SUVbwmin) Value: -1.01 [Bottom 9%] (-0.8%)

Indicates the areas of lowest metabolic activity within the tumor, which may represent necrotic or poorly perfused regions.

Large Zone Emphasis (CT) (GLZLM_LGZE.CT) Value: 0.75 [Top 3%] (-0.7%)

Reflects the presence of large homogeneous areas; lower values suggest a chaotic, heterogeneous microenvironment.

Large Zone Low Gray-Level Emphasis (CT) (GLZLM_LZLGE.CT) Value: -0.43 [Bottom <1%] (-0.5%)

Indicates the dominance of large regions with low attenuation or metabolism, pointing to extensive necrosis or ground-glass opacities.

Minimum Tumor Density (CONVENTIONAL_HUmin) Value: -0.48 [Avg (29th %ile)] (-0.2%)

Reflects the least dense areas within the tumor on CT, often corresponding to cavitation, necrosis, or cystic degeneration.
